

MetronTMS Tank Monitoring Software

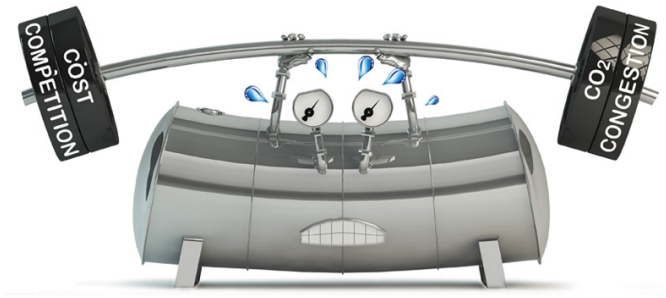

A hosted software platform that enables you to view 'live' and historical tank data securely via the internet, making tank level information on your computer, tablet and smartphone. Receive alarms via email (SMS possible on request) and collect the data via an API. Available complete with roaming sim cards. Compatible with many telemetry systems including the Metron2 and MetronATEX to suit diesel, petrol, biofuels, lubricants, chemicals (including AdBlue), waste, fertilisers, foodstuffs including milk and animal feeds.

- **View data securely online using our web based platform.**
- **Receive alarms when tanks are getting empty.**
- **Increase delivery volumes and reduce part load returns - more efficient logistics.**
- **Improved customer service.**
- **Initiate proactive delivery scheduling.**
- **Detect theft and leaks.**
- **Provide an audit trail.**

The **colour coded system**, which includes mapping, means you can see at a glance what tanks need filling and where they are.

Compatible Hardware

SPS series level sensors. Low cost, easy to install. Suit a wide range of applications including diesel, petrol, lubricants, water, waste and various chemicals including AdBlue. ATEX options available.

Non-contact level sensors such as ultrasonic and radar for aggressive chemicals, high temperatures and hygienic applications.

Metron2 telemetry device with 4 inputs and available as a battery, solar or mains powered device. Easily installed & setup either in-situ or remotely via our software platform. No programming needed.

Metron ATEX telemetry device developed for LPG tank monitoring. Battery powered with 6 inputs to be exceptionally effective on commercial sites with multiple tanks.
